

## NEW HeartVets ECG Service

We are delighted to launch the HeartVets Bee ECG, a revolution in digital cardiology. The Bee is an intuitive tablet ECG system with automatic cloud-upload (subject to Wifi), online ECG review and the ability to download and store digital reports or share with the HeartVets cardiology team for detailed interpretation at the click of a button. The device records a 6-lead high-resolution ECG and can be used for anaesthetic monitoring.

The system includes a tablet with pre-loaded software, ECG cables, technical support (updates, warranty with repair or replacement if needed) and cloud account fees, all for a monthly fee of £75+VAT (no up-front cost). This also entitles your clinic to discounted HeartVets ECG interpretations should you need them.

**Introductory offer: £50 + VAT per month (first three months).**

- £75 per month thereafter (2 year minimum term contract)
- 35% discount on ECG interpretations for Beecardia clients (£35 + VAT, normally £55 + VAT)
- 3 free ECG interpretations per year
