

## **Holter Monitor Diary and Information for Owners**

Your pet has been fitted with a small portable digital ECG recorder to assess his/her heart rate and rhythm for a continuous period of time away from the clinic. Most dogs are happy wearing the monitors, but please observe your dog carefully as the Holter monitor is an expensive and sensitive medical device. If you are concerned your pet may interfere with the monitor please do not leave your pet unattended or obtain an appropriate collar from your vet.

Please complete the diary below for events such as feeding, exercise, excitement. If your dog should suffer a collapse episode whilst wearing the monitor (a "patient event") please open the top flap of the Holtervest and **press the green button** on the monitor. This will not stop the recording but it will mark the time of the episode on the recording.

The monitor **IS NOT WATERPROOF.** Please ensure your dog does not swim whilst wearing the monitor and try to keep the vest from getting too wet or muddy as this may cause discomfort.

Please <b>return the com</b>	pleted diary to you	r vet when the m	nonitor is removed.	Thank you!
